

TOXICITY DOCUMENT

8 ECO-HEALTHY REASONS TO SKATE ON XTRAICE

1. While skating on XTRAICE panels, the action of the blades only produces a minor, surface-level cut and therefore only generates millimeter-sized (non-breathable) shavings since there is never an abrasion effect. Therefore, in no case do dust or vapors occur..
2. The majority raw material in XTRAICE panels is food grade polyethylene.
3. Polyolefins like the XTRAICE material are biologically inert and therefore the products manufactured with them are not harmful.
4. Polyolefins are not genotoxic, carcinogenic or toxic to reproduction.
5. Ecotoxicity: Due to its molecular structure XTRAICE material does not cause contamination in water.
6. Glide-inducing lubricating additives incorporated in XTRAICE panels are harmless oils of high purity of the same nature as those used in cosmetics. XTRAICE can provide a certificate of non-toxicity.
7. Cleaning XTRAICE panels is easy and effective using only household products..
8. The quality control processes implemented in XTRAICE are certified according to ISO 9001: 2015 and ISO 14001, guaranteeing total respect for the environment.
